

MASTER'S DEGREE IN TELECOMMUNICATION ENGINEERING

Telematics Specialization

Vigo, November, 2021

Contents of TELEMATICS Specialization

Contents of TELEMATICS Specialization

NETWORK THEORY

- Massive IoT
- Robustness
- 5G/6G technologies
- Information dissemination
- Collective intelligence
- LoPAN Networks
- Personal Networks

INTERNET

- Communication principles
- Mass storage
- Edge-computing architectures
- Massive random access
- Data-driven design

DATA ANALYSIS

- Classification
- Clustering
- Data visualization
- Large-scale analysis
- Data transformation
- Link analysis
- Folksonomies

WEB

- Reference architectures
- Semantic Web
- Web services
- Social Web
- Indexing
- Collective intelligence

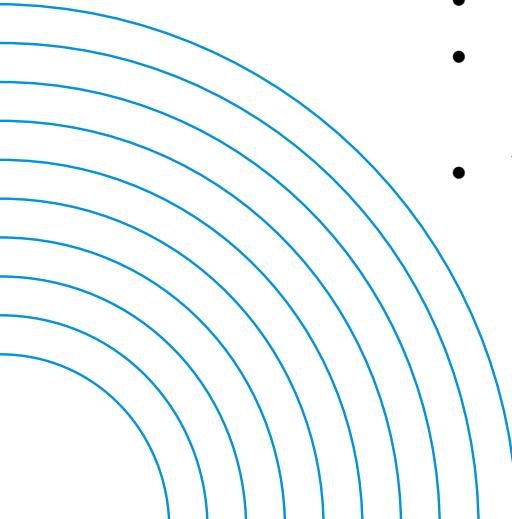

COMPUTING

- Ubiquitous computing
- High availability
- Evolutionary techniques
- Parallelization
- Distributed systems
- Grid and cluster computing

Job duties

- Cloud computing: Amazon AWS, Azure, Virtualization
- CISO (Chief Information Security Officer)
- Networking: Cisco routers and switches
- Front end developer: HTML, CSS and Javascript
- Big Data: Apache Hadoop, Spark, HBase, Kafka, Impala and Hive environments;
- Scala and Java; databases; data analysis tools;
- Cloud computing technologies

SECTOR	THE MOST WANTED	THE HIGHEST PAID
TELECO	Teleco Solutions Pre-sales Engineer	IT Security Expert
IT	Full Stack Developer	Big Data Architect
Commercial	Key Account Manager	Export Area Manager
Marketing	Chief Digital Officer	Hear of Programming Trader
